SKILLS

Testing

- Manual, Exploratory & Functional Testing
- Regression, E2E & Risk-Based Testing
- API Testing, Bug Reporting & UX Validation

Tools

- Cypress · Postman · Jira
- Chrome DevTools · SQL
- Git · GitHub

Development

- JavaScript · TypeScript
- React · Redux · Jest

AI & Modern QA

- AI-Assisted Testing
- Prompt Engineering for QA
- Risk Analysis with AI
- AI-Based Edge Case Discovery

LANGUAGES

Spanish: Native
English: Professional working proficiency
Catalan: Beginner

EDUCATION

QA Engineer

Ministry of Testing

Web Developer

42 Barcelona

Business Administration

UPAEP

PROFILE

Junior QA Engineer with hands-on experience in manual, exploratory, functional and API testing within Agile software teams.

My software development background helps me understand product behaviour across the delivery cycle, collaborate closely with engineers, and communicate defects clearly and precisely.

I also use AI tools to support test design, uncover edge cases, assess risk, and strengthen exploratory testing.

PROFESSIONAL EXPERIENCE

QA Tester · Neulygron [AI Expense Classifier](#) · 2025 – Present

- Performed exploratory testing during development across PDF upload, AI classification, category management, authentication, and end-to-end user journeys.
- Identified and documented important defects, including an authentication bypass and a very high-risk issue where non-financial PDFs returned incorrect classification results.
- Scored defects with a probability × impact risk matrix and shared continuous feedback on security, usability, and functionality to strengthen release confidence.
- Used AI-assisted workflows to generate test ideas, surface edge cases, and analyse requirements.

QA Tester · Shady Meadows B&B

[Restful Booker Platform Demo](#) · 2025

- Executed exploratory and risk-based testing across booking flows, room reservation, contact form, admin panel, navigation, and footer links.
- Logged and documented 16 defects, ranked by risk using a 5×5 probability × impact matrix.
- Highlighted critical booking and validation failures that affected core user journeys and release confidence.

Frontend Developer

Bikup Tech Solutions · 2022 – 2024

- Collaborated with QA and engineers in 3 Amigos and ETS sessions to clarify acceptance criteria and reduce delivery risk.
- Contributed to unit and E2E testing, validating feature behaviour before and during release.
- Validated feature flag rollouts to support safer releases and lower deployment risk.
- Detected defects and verified functionality throughout the development cycle in Agile teams.

Restaurant Manager

El Pulpo · 2017 – 2021

- Coordinated teams and resolved operational issues in fast-paced environments.
- Built attention to detail, clear communication, and process discipline now applied in QA work.

WHAT I BRING

Quality Mindset Challenge assumptions and surface risks before they reach users.	Technical Background Software development experience that supports engineer collaboration and precise defect reporting.	AI-Assisted Testing Apply AI to strengthen test design, uncover edge cases, and accelerate risk analysis.	Agile Collaboration Partner with QA and engineering teams to clarify requirements and protect release quality.
